CertiPath

TrustZero Module

Are your credentials SECURE?

Are your ID processes a MANUAL BURDEN?

ID MGT

You trust your strong **locks**…

Do you trust everyone's *keys*?

If a KEY is not SECURE, you need to know immediately!

TrustSuite's industry-leading feature set delivers HIGH ASSURANCE and AUTOMATES your entire identity management process.

Your fortified premises must not become a house of (prox) cards

TrustZero Overview

TrustZero is CertiPath's **high-assurance** credential **validation** solution that provides robust **business logic** and **configurability** for a PACS' response to a range of validation conditions

The Problem: Dangerous Validation Time Lag

Current validation systems suffer from **"revocation blindness:"** a credential revocation typically takes **36 hours** to impact what happens at a door.

The Solution: TrustZero & TrustMonitor

Achieve near real-time knowledge of credentials via a sophisticated layer of status-checking techniques, which reduces this operational blind spot to **2 minutes**.

Would you hire blind Security Officers?   *Would you give Lobby Guards 36-hour breaks?*

TrustMonitor Overview

- Public, community, and enterprise-specific settings
- Near-real time validation of credentials
- Focuses on PKI credentials and issuers trusted via the US Federal Bridge
- Private instances for any roots of trust an enterprise/community may also wish to monitor
- Proactively tracks and "pushes" updated credential information to achieve quicker propagation and synchronization of credential status changes
- Streamlines the configuration of the trust path, ensuring accurate status
- Enables configurable constraints at a global and local level when using TrustZero

TrustZero with TrustMonitor Feature Summary

✓ Enterprise-level **continuous validation**

✓ **Near-Real-Time revocation**

✓ **VIP** privileged credentials

✓ Configurable **extended validity period** / **degraded mode** settings

✓ Validation **enforcement** options

✓ **Single network** location for all validation queries

✓ Validate all credentials within complex **trust communities**

✓ **Realtime automated trust list pruning** with no manual checks
