TrustManager

TrustManager Overview

TrustManager is CertiPath's integration solution for **provisioning** of **identity records** and **high assurance credentials** across **PACS**. TrustManager's custom **workflow** tool connects all phases of the **identity lifecycle** in one centralized application.
TrustManager, when paired with **TrustMonitor**, delivers **intercommunity provisioning** to support several disparate organizations that share a trust relationship to form a community.

Our solution provides **automated**:
- Physical access rights to each community member's employees designated as interoperable
- Updates or removal of access when appropriate

CertiPath
TrustManager Feature Summary

✓ **FICAM v2** physical identity access manager

✓ **Automatically** provision/update/deprovision identity and credential records to any PACS

✓ **Self-enrollment** feature (SnapEnroll)

✓ Compatible with all **PIV** applet-based, **proximity-based,** and **dual-hybrid** credentials

✓ **Workflow** tool to customize connections to multiple APIs:
- Pull credential information from CMS or legacy systems
- Transform data to send to other operational systems
- Automate intercommunity federal provisioning
- Receive and send secure system transactions (SFTP)
- Configure pre/post processing rules
- Troubleshoot workflows: maintenance mode, exception handling/retries
- Compare/reconcile/remediate data sets across multiple systems
